

Hope for change.
Help create it.

Ovarian Cancer
Research Alliance
LIVING LAB
FOR UTERINE & OVARIAN CANCER

Your Experience Powers Progress

Nearly 90,000 people will be diagnosed with ovarian or uterine cancer this year. Progress has been too slow, in part because these diseases lack the large, unified datasets researchers need to see patterns and find better answers.

Together, we can change that.

If you have ovarian or uterine cancer, we invite you to join the Living Lab—a secure, de-identified and privacy-protected registry that combines real-world data on medical records, treatment side effects, quality of life, and financial impact, to create the most complete picture of these diseases ever assembled.

By capturing how treatments affect people in the real world, this data reveals patterns—what’s working, what isn’t, and how care can be improved—helping inform better decisions for patients today while advancing future breakthroughs.

Simply by sharing your own experience, you can help unlock the data needed to improve care for patients today, while driving breakthroughs for the future.

As part of your participation, you will also have access to resources created for you, such as data summaries and a personalized symptom tracker to support conversations with your care team.

For over three decades, Ovarian Cancer Research Alliance (OCRA) has been a trusted partner on the mission to change outcomes, investing more than \$140 million in scientific discovery, catalyzing billions more in federally funded research and education, and supporting more than 140,000 people a year along the way.

The Living Lab powers OCRA’s Community Accelerated Research Exchange—a first-of-its-kind ecosystem that brings patients, researchers, clinicians, and advocates into one connected space that can help researchers identify patterns, improve treatments, and accelerate discoveries in real time.

It’s all made possible by you. Your participation powers this entire system, enabling researchers to generate insights, collaborate globally in real time, and pursue breakthroughs that weren’t possible before.

Join the Living Lab: OCRAhope.org/LivingLab

Together, we can change what’s possible—for today’s patients and for future generations.
